

The Pink Pad®

The Safest, Most Clinically-Proven and Preferred
Trendelenburg Positioning Solution

Prevent Sliding

Reduce HAPI Risk

Avoid Nerve Injury

- **Prevent Patient Sliding**

The Pink Pad is the safest, most effective solution for reducing unwanted movement in steep Trendelenburg; even for heavy, high-BMI patients.

- **Reduce Risk of Hospital Acquired Pressure Injuries (HAPIs)**

The Pink Pad's totally unique, open-cell material is breathable, moisture wicking, insulative, soft-to-the-touch, immersive, and enveloping. Independent studies prove that the Pink Pad reduces erythema compared with other positioning solutions.

- **Eliminate Brachial Plexus Injury Risk**

The Pink Pad is clinically proven to reduce post-operative pain in surgical patients. It functions without placing pressure on the head, neck, or shoulders; thereby eliminating the risk of preventable nerve injuries.

Pressure Relief

In a study of 15 subjects ranging from 16-54 BMI (average BMI of 35.5), the Pink Pad provided an average peak pressure reduction of 43%.

The cost of treating Hospital Acquired Pressure Injuries (HAPIs) is over \$1 billion annually, with average increased hospital stays at nine days, and non-reimbursed treatment costs potentially exceeding \$40,000 per patient.

Alessio Pigazzi
M.D., Ph.D., FACS

Patient Safety Breakthroughs

With a mutual goal of addressing every challenge associated with Trendelenburg positioning, Xodus Medical collaborated with Dr. Alessio Pigazzi, an international leader in minimally-invasive general and colorectal surgery. The resulting Pink Pad revolutionized Trendelenburg positioning; protecting countless patients and earning more than 10 US patents.

Material Differences

Clinical leaders in the world's top hospitals trust the Pink Pad's patented, HAPI-reducing material to maximize patient safety and eliminate sliding in steep Trendelenburg

A Complete Positioning Solution

- Pink Pad XL
- Lift Sheet
- Skin-Friendly Body Strap
- One-Step Arm Protectors w/ DermaProx™
- Pink Pad Head Positioner

“The Pink Pad - Safe Assist made it safer and easier for our staff to position and move patients, especially those with a higher BMI” - Kate Schuh White, MD, FACOG - OB/GYN

- Safely prevent patient sliding, HAPI formation, and nerve damage in Trendelenburg positions
- Establish a clinical evidence-based best practice for reducing peak pressure and preventing unwanted patient movement
- Easily transfer and position patients with integrated straps

“Postoperative erythema was significantly less common on the Pink Pad...”¹
“Patients on the Pink Pad had significantly less displacement with Trendelenburg and faster positioning compared to the other surfaces.”²
